Description

PRODUCT NAME: HP DECset for OpenVMS V12.8 SPD 42.29.18

DESCRIPTION

This document addresses HP DECset Version 12.8 for OpenVMS Alpha Systems and HP DECset Version 12.8 for OpenVMS Integrity servers.

HP DECset for OpenVMS Alpha Systems is an integrated programming tool set that supports software developers' coding, debugging, testing, and maintenance activities.

HP DECset Version 12.8 for OpenVMS Alpha Systems contains the following components:

- HP Language–Sensitive Editor (LSE), Version 5.1, for OpenVMS Alpha Systems
- HP Source Code Analyzer (SCA), Version 5.1, for OpenVMS Systems
- HP Digital Test Manager, Version 4.4, for OpenVMS Alpha Systems
- HP Performance and Coverage Analyzer (PCA), Version 5.0, for OpenVMS I64 Systems
- HP Code Management System (CMS), Version 4.5, for OpenVMS I64 Systems
- HP Module Management System (MMS), Version 3.8, for OpenVMS I64 Systems

The tools in the DECset tool set can be used in either a workstation or character-cell terminal environment. All components include both HP DECwindows Motif® for OpenVMS Alpha/I64 and command-line interfaces.

In addition to these six tools, DECset has an Environment Manager (ENVMGR) that provides a single mechanism for tailoring the execution environment for a set of DECset tools. DECset also provides the program design facility, a set of features in LSE/SCA and the compilers, that aids in the detailed program design phase of software development.

HP DECset for OpenVMS Alpha/I64 Systems Components

HP Language–Sensitive Editor/Source Code Analyzer for OpenVMS Alpha/I64 Systems:

Language-Sensitive Editor

The Language–Sensitive Editor (LSE) is a multi-language programmer's editor. Language-specific templates and online language help assist both new and experienced programmers in developing programs faster. With LSE, users can efficiently edit, compile, review diagnostic information from compilations, and correct compile time errors without exiting the editor. LSE also enables users to customize and extend their editing environment.
Programmers can perform low-level program designs with LSE by embedding pseudocode in source code. Users can also view source code at various levels of detail by replacing a sequence of source lines with a single overview line.

LSE provides an interface via callable routines, as well as through the LSE command-line interface and the DECwindows Motif for OpenVMS Alpha/I64 interface.

LSE supports Java and HTML.

**Note:** The following LSE-supported compilers are available on the OpenVMS Alpha/I64 platform:

- HP Ada for OpenVMS Alpha Systems Only
- HP BASIC for OpenVMS Alpha/I64 Systems
- HP C for OpenVMS Alpha/I64 Systems
- HP C++ for OpenVMS Alpha Systems Only
- HP COBOL for OpenVMS Alpha/I64 Systems
- HP Fortran for OpenVMS Alpha/I64 Systems
- HP Pascal for OpenVMS Alpha/I64 Systems

LSE works in conjunction with CMS, SCA, and the OpenVMS Alpha/I64 Debugger to provide a highly interactive, online environment that facilitates the NAVIGATE-EDIT-COMPILE-DEBUG portion of the program development cycle. DECset users can directly reserve and replace files from CMS while in LSE, go to the exact source code location in LSE from SCA, and go to the exact source code location in LSE from the OpenVMS Alpha/I64 Debugger.

**Source Code Analyzer**

The Source Code Analyzer (SCA) aids programmers in understanding the complexities of software systems. Because it allows users to analyze an entire system, as opposed to individual modules, and it helps users understand unfamiliar systems, SCA is extremely useful during both the implementation and maintenance phases of a project.

SCA provides navigation capabilities to assist users in locating and viewing components of their source code. SCA accomplishes this by storing compiler-generated information about a set of source files in an SCA library. SCA then allows users to perform queries about their source code in the following ways:

- Using a name browser to locate all items that match a search string.
- Specifying a cross-reference query to find how and where program symbols are used.
- Specifying a call graph query to graphically display call relationships between routines.
- Specifying a data structure query to graphically display the structure of data types in the source code or to find symbols of a given type.

User controlled marking of items of interest is provided so users can mark items to be queried and save that information to a command file to be reused.

After users have a query result, they can use the go-to-source feature to navigate to locations of interest in their source code.

SCA also provides static analysis capabilities to assist users in checking for consistent use of program symbols.

SCA provides an interface via callable routines, as well as through the SCA command-line interface and the DECwindows Motif for OpenVMS Alpha/I64 interface.

**Note:** The following SCA-supported compilers are available on the OpenVMS Alpha/I64 platform:

- HP Ada for OpenVMS Alpha Systems Only
- HP C for OpenVMS Alpha/I64 Systems
- HP C++ for OpenVMS Alpha Systems Only
- HP COBOL for OpenVMS Alpha/I64 Systems
- HP Fortran for OpenVMS Alpha/I64 Systems
- HP Pascal for OpenVMS Alpha/I64 Systems

* Refer to the Product SPD or Release Notes for extent of support.

HP LSE/SCA for OpenVMS Alpha/I64 Systems is a component of the DECset for OpenVMS Alpha/I64 Systems product and is also available separately. Please refer to the ORDERING INFORMATION section of this SPD.

**HP Digital Test Manager for OpenVMS Alpha/I64 Systems**

The HP Digital Test Manager for OpenVMS Alpha/I64 Systems is a regression testing tool that automates the creation and maintenance of regression tests. It also automatically compares test run results with expected test results. The HP Digital Test Manager provides users with flexibility in organizing tests, selecting tests for execution, and verifying and reviewing test results. With the Digital Test Manager users can:

- Test batch and command line applications.
- Create and record tests.
- Group tests into meaningful combinations.
- Execute specific tests, groups of tests, or combinations of groups of tests.
- Compare the results of the executed tests with benchmark test results to determine differences.
- View test results interactively.
- Update benchmarks as needed.
Filter test results to ignore output that is expected to change for each test execution.

The HP Digital Test Manager enables users to store software test descriptions and related files in CMS libraries for storage efficiency.

The HP Digital Test Manager provides an interface through callable routines, as well as through the Digital Test Manager command-line interface and the DECwindows Motif for OpenVMS Alpha/I64 interface.

The HP Digital Test Manager for OpenVMS Alpha/I64 Systems is a component of the HP DECset for OpenVMS Alpha/I64 Systems product and is also available separately. Please refer to the ORDERING INFORMATION section of this SPD.

HP Performance and Coverage Analyzer for OpenVMS Alpha/I64 Systems

The Performance and Coverage Analyzer (PCA) for OpenVMS Alpha/I64 Systems helps users pinpoint execution bottlenecks in application programs. PCA can also identify which parts of an application are not executed by a given set of test data. PCA has two components: the Collector, which gathers performance or test coverage data on the running user program; and the Analyzer, which later processes and displays the collected data. The Analyzer graphically presents information in four types of charts: histograms, tables, annotated source listings, and call trees.

PCA does not analyze operating system performance or aid in hardware resource planning.

PCA can gather and report on the following types of performance data:

- Call stacks (see OpenVMS I64 release notes)
- CPU sampling data
- Event markers
- PC sampling data
- Page fault data
- System services data
- Input/Output data
- Exact execution counts
- Test coverage data
- Ada tasking data
- Unaligned access fault data

Additional PCA features include the following:

- Traversing commands to sift through performance data
- Screen mode to display different types of data in separate windows
- Multiple data kinds allowing the display of different categories of performance data in the same histogram or table
- Acceptable noncoverage indicating portions of code that are acceptably noncovered to the Analyzer
- Filtering to analyze only a subset of data

PCA works in concert with LSE and the Digital Test Manager. From the character-cell version of PCA, users can communicate with LSE and can examine source code. When used with the HP Digital Test Manager, PCA can evaluate the code coverage of a user’s test system.

PCA provides a command-line interface and the DECwindows Motif for OpenVMS Alpha/I64 interface.

HP Code Management System for OpenVMS Alpha/I64 Systems

The Code Management System (CMS) for OpenVMS Alpha/I64 Systems provides an efficient method for storing project files and tracking all changes to those files. Code management is especially important to projects that have long life spans or several versions of the software.

CMS stores any kind of RMS file, including: documents, plans, specifications, status reports, source code files, object files, executable images, sixel files, and other records, and keeps these files in project libraries. CMS also stores history information. As a project evolves, CMS tracks changes to the library by storing only the changes made to a file. Not only does this reduce the amount of disk space used for storing multiple versions of files, but it also allows CMS to reconstruct any previous version of a file and to identify the changes made between any two versions. In addition to storing successive changes, CMS maintains a record of who is currently working on a library element and a historical record of library access.

With CMS, users can:

- Support multiple project libraries.
- Retrieve previous generations (versions).
- Delete generations.
- Obtain a report of file modifications, including when, why, and by whom the modification was made.
• Determine the origin of each line of a file, either as an annotated listing or as comments in the file.

• Manage concurrent modifications.

• Merge separately developed modifications.

• Combine related files together as a class (group).

• Relate the generation of one element to the corresponding generations of other elements for purposes of freezing baselines or releases and for organizing ongoing development.

• Interface via callable routines, as well as through the CMS command-line interface and the DECwindows Motif for OpenVMS Alpha/I64 interface.

• Through the use of CMS access control lists, fine tune security mechanisms applied to CMS libraries, and provide a means of notification about library events.

CMS can act as a project's central repository, by storing and tracking source-code files, object code, documentation, and a variety of files generated by other tools. CMS can store files for MMS and the Digital Test Manager. LSE and Digital Test Manager users can access CMS elements directly from within LSE and Digital Test Manager.

HP Code Management System for OpenVMS Alpha/I64 Systems is a component of the HP DECset for OpenVMS Alpha/I64 Systems product and is also available separately. Please refer to the ORDERING INFORMATION section of this SPD.

HP Module Management System for OpenVMS Alpha/I64 Systems

The Module Management System (MMS) for OpenVMS Alpha/I64 Systems automates and simplifies the building of software applications, whether they are simple programs of only one or two files or complex programs consisting of many source files, message files, and documentation. MMS can optimize the build process by rebuilding only those components (and their dependencies) that have changed since the system was last built. In this way, MMS eliminates the steps of recompiling and linking modules that have not changed. MMS can automatically generate description files. Once users create a description file containing the rules describing the relationships among the components of their application and the MMS commands to build the application, MMS can build both small or large systems with a single command.

MMS provides a command-line interface and the DECwindows Motif for OpenVMS Alpha/I64 interface.

HP Module Management System for OpenVMS Alpha/I64 Systems is a component of the HP DECset for OpenVMS Alpha/I64 Systems product and is also available separately. Please refer to the ORDERING INFORMATION section of this SPD.

HARDWARE REQUIREMENTS

Processors Supported:

Any OpenVMS Alpha system that is capable of running OpenVMS Version 7.3-2, 8.2 or 8.3. Refer to the OpenVMS Software Product Description (SPD 82.35.xx).

Any OpenVMS l64 system that is capable of running OpenVMS Version 8.2-1 or 8.3. Refer to the OpenVMS Software Product Description (SPD 82.35.xx).

Terminals

Character cell interfaces for DECset are supported on the following terminals:

• VT1xx
• VT2xx
• VT3xx
• VT4xx
• VT5xx
• ANSI CRT

Disk Space Requirements (Block Cluster Size = 1):

Each component of HP DECset for OpenVMS Systems can be installed separately. Each component requires the disk space specified in the following table for a successful installation:

<table>
<thead>
<tr>
<th>Component</th>
<th>Space Required To Install</th>
<th>Space Required For Use (permanent)</th>
</tr>
</thead>
<tbody>
<tr>
<td>LSE</td>
<td>45,000 blocks (23.0M bytes)</td>
<td>32,500 blocks (16.5M bytes)</td>
</tr>
<tr>
<td>SCA</td>
<td>25,500 blocks (13.0M bytes)</td>
<td>22,000 blocks (12.0M bytes)</td>
</tr>
<tr>
<td>Digital Test Manager</td>
<td>25,000 blocks (12.5M bytes)</td>
<td>12,000 blocks (6.2M bytes)</td>
</tr>
<tr>
<td>PCA</td>
<td>40,000 blocks (20.5M bytes)</td>
<td>12,000 blocks (6.2M bytes)</td>
</tr>
<tr>
<td>MMS</td>
<td>7,000 blocks (3.6M bytes)</td>
<td>4,550 blocks (2.4M bytes)</td>
</tr>
<tr>
<td>CMS</td>
<td>44,000 blocks (23.0M bytes)</td>
<td>7,000 blocks (3.6M bytes)</td>
</tr>
</tbody>
</table>
Requirements for installation of all HP DECset for OpenVMS Systems components, including Language–Sensitive Editor support for all languages, requires the disk space specified in the following table:

<table>
<thead>
<tr>
<th>Component</th>
<th>Space Required To Install</th>
<th>Space Required For Use (permanent)</th>
</tr>
</thead>
<tbody>
<tr>
<td>ENVMGR</td>
<td>13,500 blocks (7.0M bytes)</td>
<td>12,000 blocks (6.2M bytes)</td>
</tr>
</tbody>
</table>

All Components: 200,000 blocks (102.6M bytes) 100,500 blocks (52.3M bytes)

These counts refer to the maximum disk space required on the system disk. The sizes are approximate; actual sizes may vary depending on the user’s system environment, configuration, and software options.

The minimum supported memory for this application running in a standalone DECwindows Motif for OpenVMS environment, with both the client and server executing on that same system, is 32 MB.

The performance and memory usage of DECwindows Motif for OpenVMS applications are particularly sensitive to system configuration. Less memory may be required on the DECwindows Motif for OpenVMS client system (the system where the software is installed and executed) if the server (the component that displays the application) resides on another system. More memory may be required on a system with several applications running or where it may be desirable to improve the performance of an application.

**CLUSTER ENVIRONMENT**

This layered product is fully supported when installed on any valid and licensed VMScluster configuration without restrictions. The HARDWARE REQUIREMENTS sections of this product’s Software Product Description detail any special hardware required by this product.

* VMSc1uster configurations are fully described in the HP VMSc1uster Software for OpenVMS Software Product Description (SPD 29.78.xx).

**SOFTWARE REQUIREMENTS**

* OpenVMS Alpha Version 7.3-2, 8.2 or 8.3. Refer to OpenVMS Software Product Description (SPD 82.35.xx)

For Systems Running DECwindows Motif for OpenVMS Alpha:

* OpenVMS Alpha Version 7.3-2, 8.2 or 8.3. Refer to OpenVMS Software Product Description (SPD 82.35.xx).

* OpenVMS I64 Version 8.2-1 or 8.3. Refer to OpenVMS Software Product Description (82.35.xx)

* DECwindows Motif for OpenVMS Alpha and I64, Version 1.6 (SPD 81.70.xx)

* DECwindows Motif for OpenVMS Alpha, Version 1.3-1 or 1.5 (SPD 81.70.xx)

**OPTIONAL SOFTWARE**

Certain versions of the following products depend upon a specific version of the operating system. Please refer to the Software Product Description of the product in question to determine which version is necessary.

* HP Ada Version (SPD 45.00.xx)

* HP BASIC Version (SPD 25.36.xx)

* HP C Version (SPD 25.38.xx)

* HP C++ Version (SPD 70.57.xx)

* HP COBOL Version (SPD 45.92.xx)

* HP Fortran Version (SPD 56.18.xx)

* HP Pascal Version (SPD 25.11.xx)

**GROWTH CONSIDERATIONS**

The minimum hardware/software requirements for any future version of this product may be different from the requirements for the current version.

**DISTRIBUTION MEDIA**

DECset for OpenVMS Alpha is available on the OpenVMS Alpha Software Product Library Package. The library package includes media and documentation on CD-ROM.

DECset for OpenVMS I64 is available on the OpenVMS Layered Product Library. The library package package includes media and documentation on CD-ROM.
SOFTWARE LICENSING

DECset software is furnished only under a license. The DECset license includes all components, which may also be licensed separately:

- HP Code Management System
- HP Digital Test Manager
- HP Language-Sensitive Editor/Source Code Analyzer
- HP Module Management System
- HP Performance and Coverage Analyzer

For HP DECset for OpenVMS Alpha Systems and for component products, licenses are available for Unlimited System Use, Personal Use, and Concurrent Use. Each Personal Use license allows one identified individual to use the layered product. Each Concurrent Use license allows any one individual at a time to use the layered product. The Concurrent Use licenses are shared on Alpha Systems.

For HP DECset for OpenVMS Integrity Systems and component products, a single license type called "per-core license" or PCL is offered. Each Per Core License (PCL) allows any number of individuals to use the licensed product at the same time, with one PCL license required for each processor core running OpenVMS.

For more information about HP’s licensing terms and policies, contact your local HP office.

License Management Facility Support

These layered products support the HP OpenVMS License Management Facility.

For further details on the License Management Facility, refer to the OpenVMS Operating System Software Product Description (SPD 82.35.xx) or the OpenVMS Operating System documentation. To obtain more information about the HP licensing terms and policies, contact your local HP office.

1Product ships on Layered Products Library media included in all Operating Environment media kits, available with initial OpenVMS OE order.

Hardcopy Documentation

A hardcopy documentation set can be ordered separately. The documentation set is used for all platforms.

HP DECset Hardcopy Documentation

If ordered with AlphaServer: QA-MUPAA-GZ
If ordered with Integrity Server: BA358MN

NOTE: If you are adding a layered product to an existing OpenVMS Integrity system and do not have the latest software revision on site, please contact your local Sales Representative to request a Special Media kit.

SOFTWARE PRODUCT SERVICES

A variety of service options are available from HP. For more information, contact your local HP account representative or distributor. Information is also available on www.hp.com/hps/software.

SOFTWARE WARRANTY

This software is provided by HP with a 90 day conformance warranty in accordance with the HP warranty terms applicable to the license purchase.

© 2007 Hewlett-Packard Development Company, L.P.

Confidential computer software. Valid license from HP and/or its subsidiaries required for possession, use, or copying. Consistent with FAR 12.211 and 12.212, Commercial Computer Software, Computer Software Documentation, and Technical Data for Commercial use.

The information contained herein is subject to change without notice. The only warranties for HP products and services are set forth in the express warranty statements accompanying such products and services. Nothing here in should be construed as constituting an additional warranty. HP shall not be liable for technical or editorial errors or omissions contained herein.

For the OpenVMS Integrity platform, media updates are ordered by adding SW Updates Service to individual products. The above media product numbers must be pulled into an order if SW Updates Service is planned.
